

# Selenium Automated Tests for RPP

This document describes how to use the included test scripts with Selenium IDE.

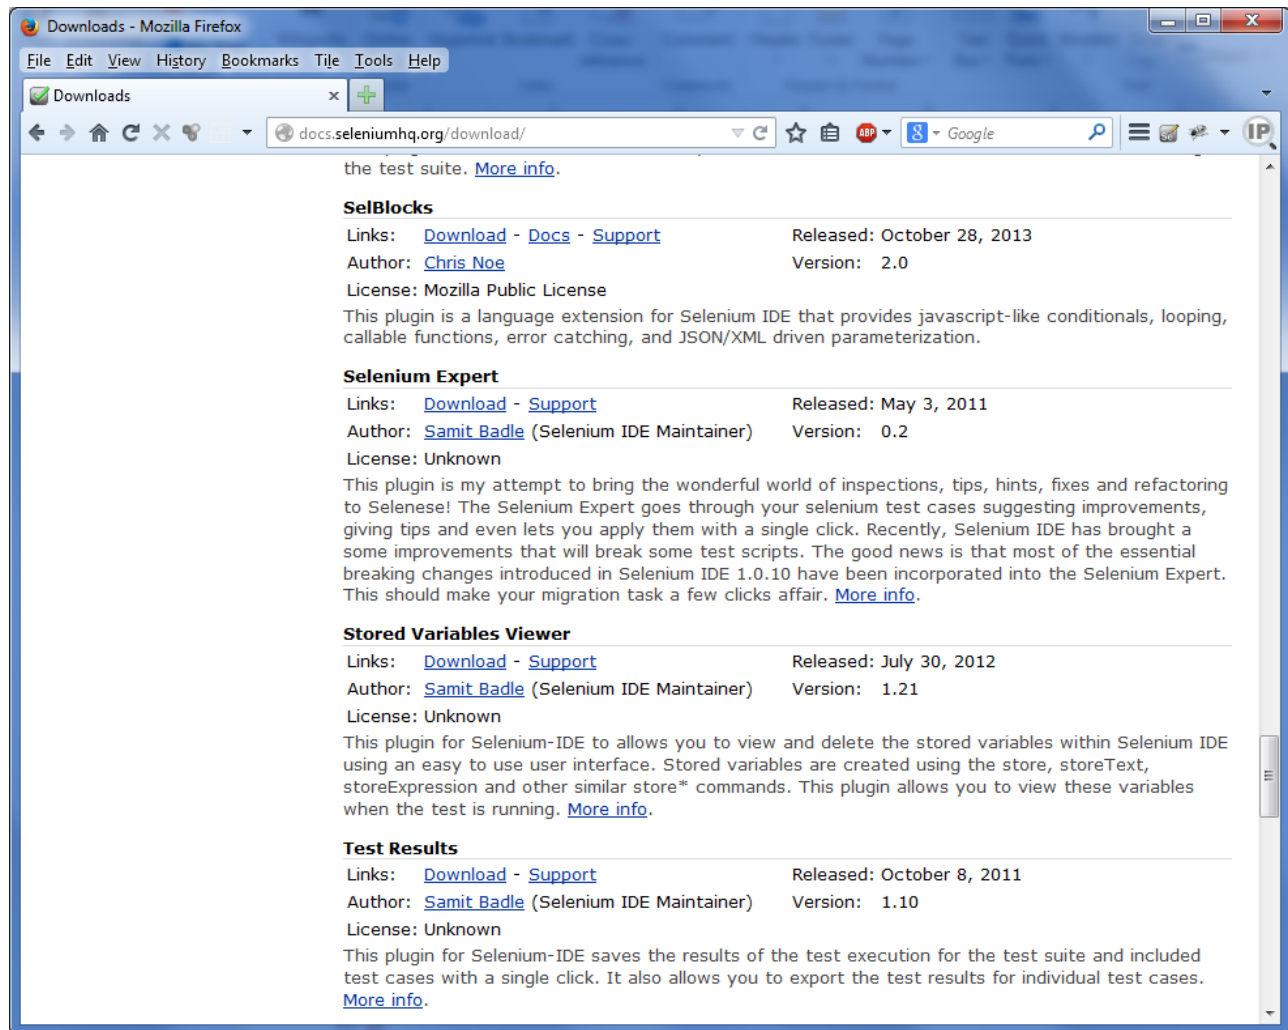

Selenium IDE is an open-source browser testing automation tool that allows testing of web-application by automating user actions in a browser. The scripts included will work by installing the Selenium addon on the Mozilla Firefox Browser.

Steps:

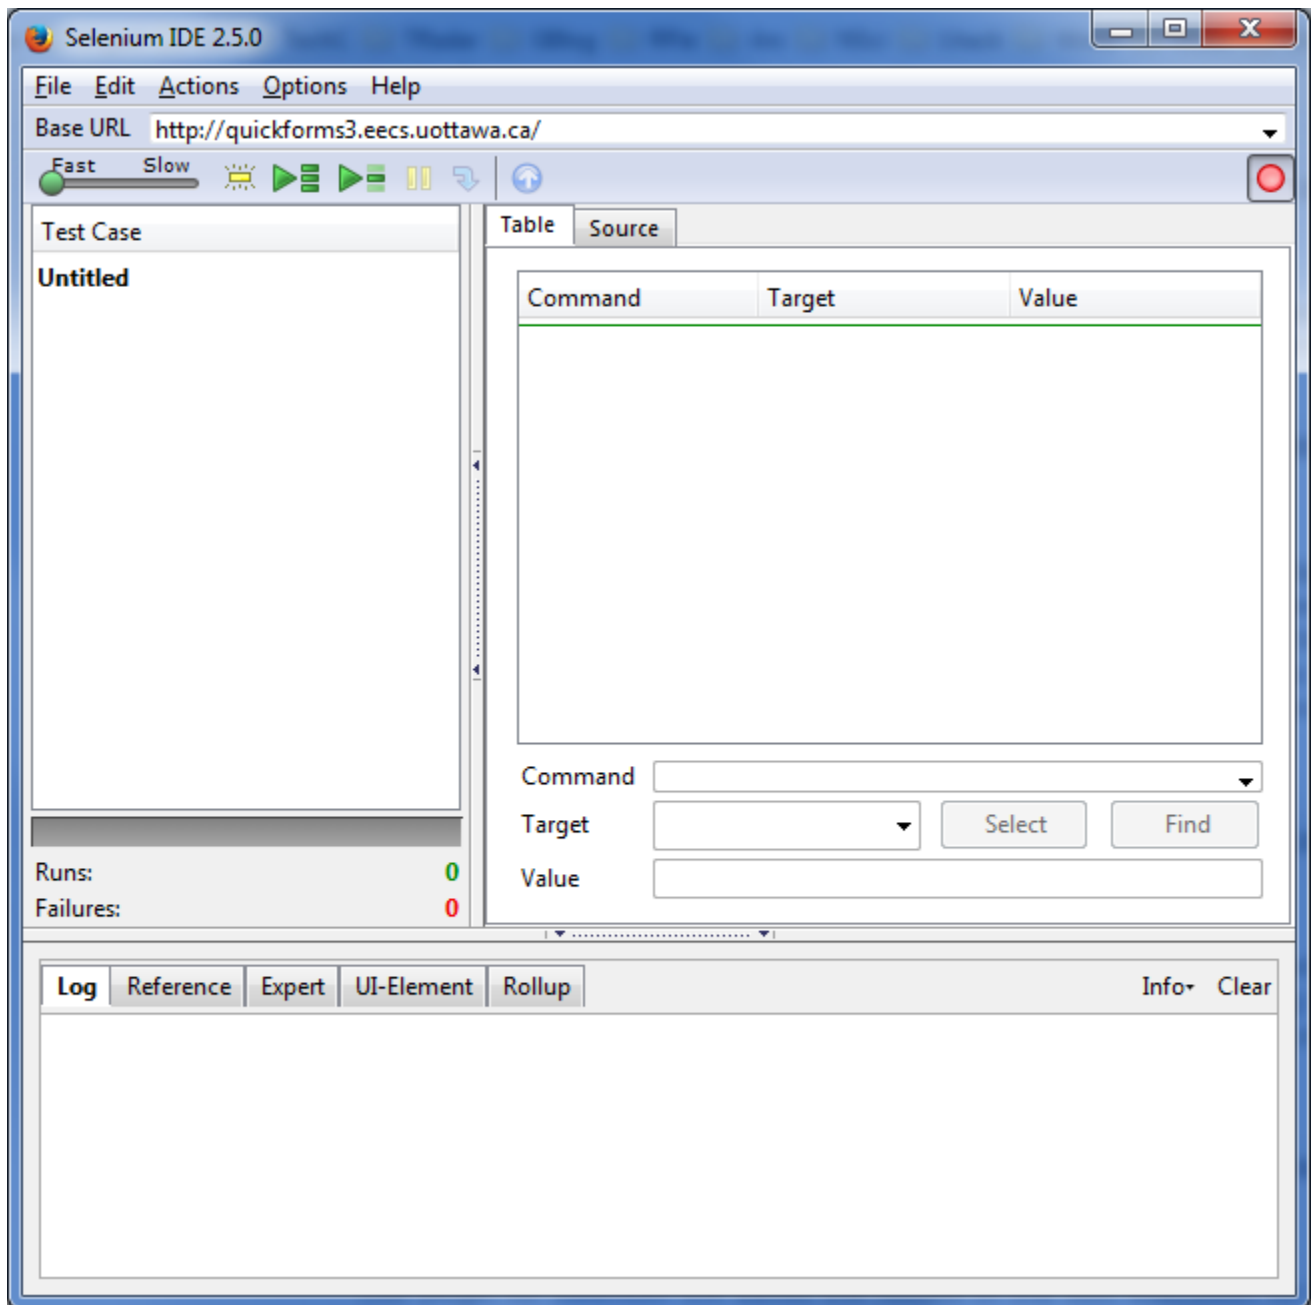

1. Install Mozilla Firefox.
2. Install Selenium IDE from <http://docs.seleniumhq.org/projects/ide/>

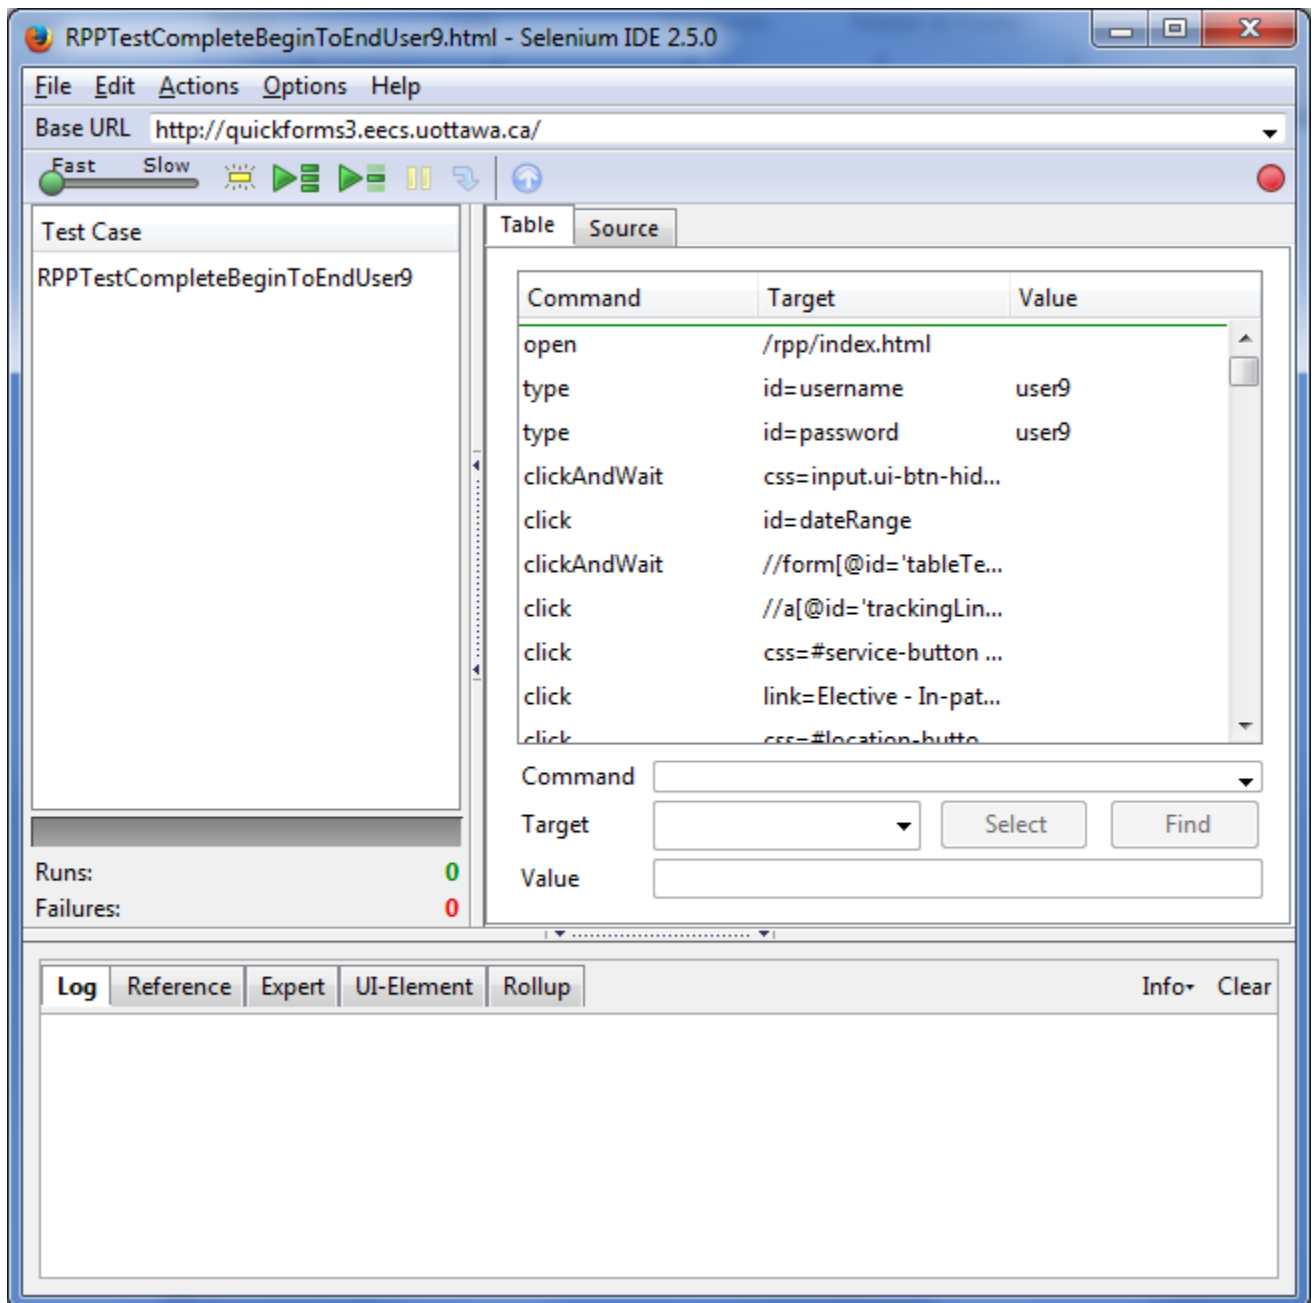

3. Install the SelBlocks addon for Selenium from <http://docs.seleniumhq.org/download/>

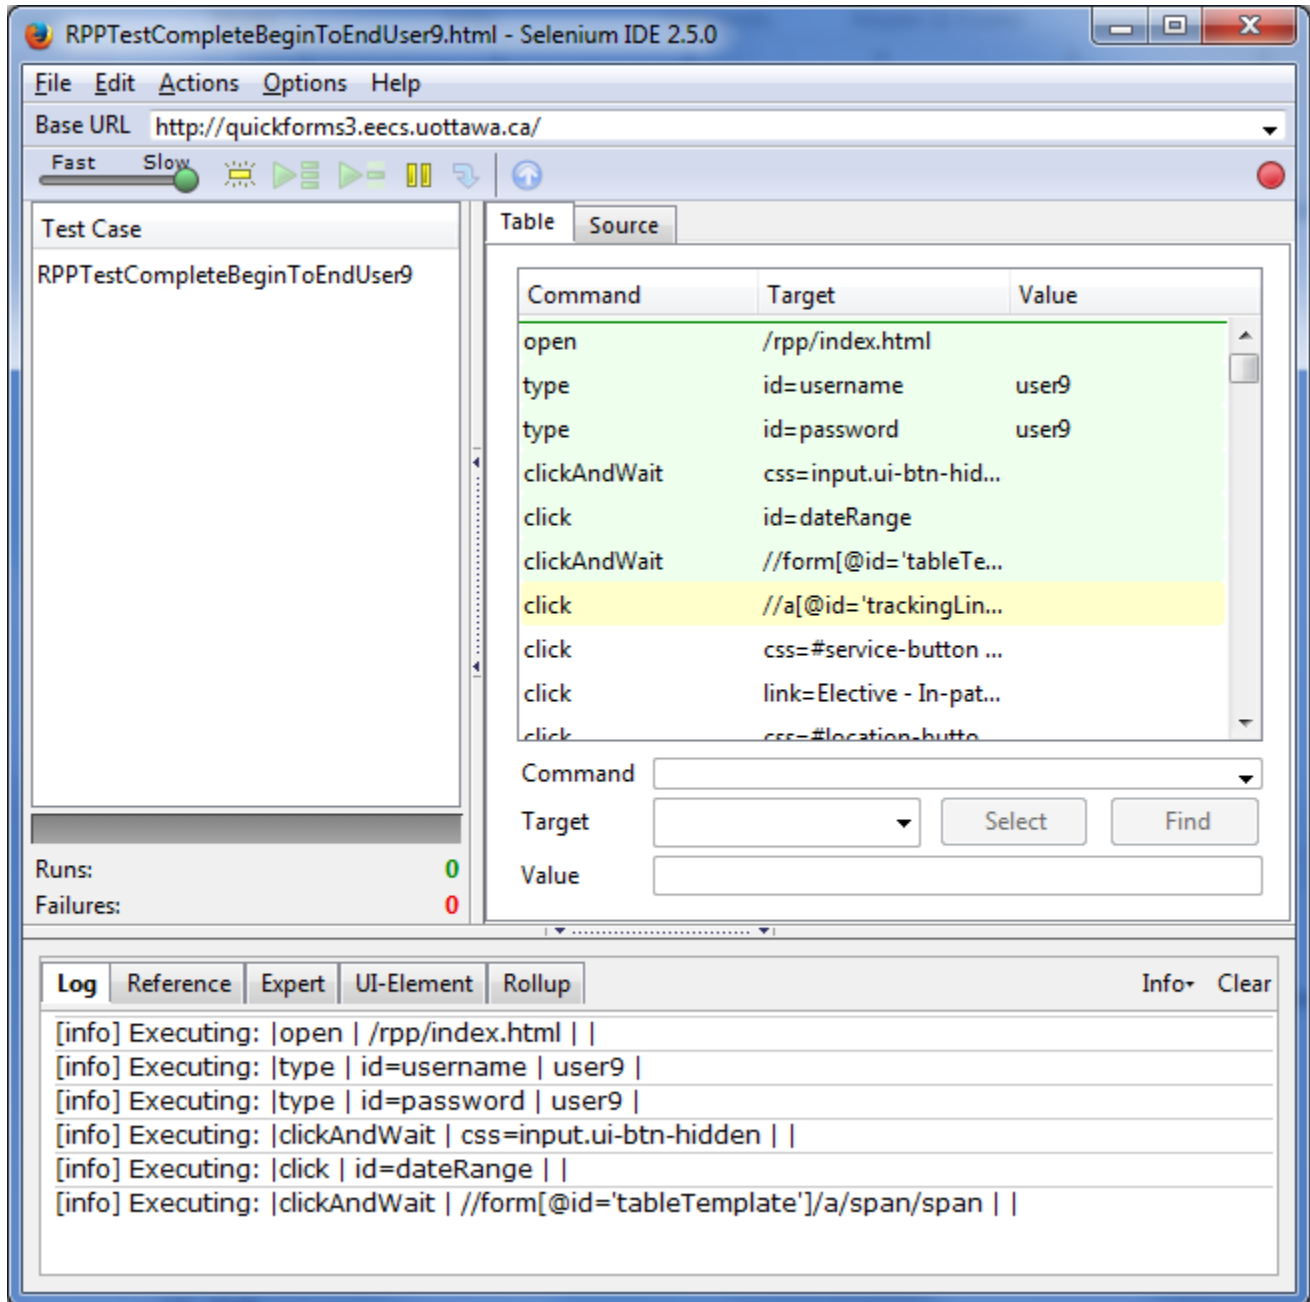

- Restart browser and open Selenium IDE

5. File > Open > Open any one of the included tests

6. Move the slider to “Slow” and click the play button. You should see the actions happening in your browser one by one

7. You can also create more test scripts using the “Record” feature of Selenium IDE. You can record user actions and save them as a test case.
